Everything works fine except when the button is pressed after the document.ready(function(){}); event has fired. It functions correctly with an exception when the button is pressed after the document.ready() event has fired. Where am I going wrong? JQuery code if (document.readyState == 'complete' && document.body.hasClass('page')) { \$("a.next").click(function(e){ var href = this.href; if(href == '' || href == '' || href == '') { e.preventDefault(); } else { e.preventDefault(); window.location = href; } return false; }); } A: You are including the.page class, but that class is not added until the window loads, maybe the button is already pressed, so you can add the event after document.ready() \$(document).ready(function(){ if (document.readyState == 'complete' && document.body.hasClass('page')) { b7e8fd5c8

Easy Screen OCR 2.1.0 Activator

Easy Screen OCR is a convenient tool to do screen capture and OCR. Capture Screen To use the program, you will have to connect your computer to the internet and open the internet browser. Once the connection is established, you can start using the program. During the installation process, Easy Screen OCR will extract a new folder in the location you have specified. Once that is done, you can start using the application from the location. Toolbar There is a toolbar in the software which enables you to access the various functionalities in the application.
